BIOLOGY

1) Match the columns and pick out the correct answer :-

	Column-I		Column-II
(a)	Fishes	(i)	4 chambered heart
(b)	Amphibians	(ii)	3 chambered heart
(c)	Crocodile	(iii)	2 chambered heart
(d)	Mammals		

(1) (a)→(i), (b)→(ii), (c)→(ii), (d)→(iii)

(2) (a)→(iii), (b)→(ii), (c)→(ii), (d)→(i)

(3) (a)→(iii), (b)→(ii), (c)→(i), (d)→(i)

(4) (a)→(iii), (b)→(i), (c)→(i), (d)→(ii)

2) In amphibians and reptiles, the left atrium receives oxygenated blood from the gills/lungs/skin and the right atrium gets the deoxygenated blood from other body parts. However, they get mixed up in the single ventricle which pumps out mixed blood called:-

(1) Incomplete single circulation

(2) Complete single circulation

(3) Incomplete double circulation

(4) Complete double circulation

3) Heart is __a__ derived organ, is situated in the __b__ cavity, in between the two __c__ slightly tilted to the __d__:-

	a	b	c	d
(1)	Endodermally	Thoracic	lungs	left
(2)	Mesodermally	Thoracic	lungs	left
(3)	Mesodermally	Thoracic	lungs	right
(4)	Endodermally	Thoracic	lungs	right

(1) 1

(2) 2

(3) 3

(4) 4

4) Choose the wrong statement :-

- (1) Heart has the size of a clenched fist
 - (2) Heart is protected by a double walled membranous bag, the pericardium
 - (3) Human heart has four chambers, two relatively large upper chambers called atria and two smaller lower chambers called ventricles
 - (4) The atrium and ventricle of the same side are separated by a thick fibrous tissue called the atrio-ventricular septum
- 5) The opening between the right atrium and the right ventricle is guarded by a valve called __x__, whereas __y__ guards the opening between the left atrium and the left ventricle :-
- (1) x is bicuspid valve, y is tricuspid valve
 - (2) x is semilunar valve, y is tricuspid valve
 - (3) x is bicuspid valve, y is semilunar valve
 - (4) x is tricuspid valve, y is bicuspid valve
- 6) Which of the following is considered as pacemaker of human heart ?
- (1) SA node
 - (2) AV node
 - (3) Purkinje fibres
 - (4) Bundle of His
- 7) Which of these has a double closed type of circulatory system ?
- (1) Cockroach, Fish
 - (2) Fish, Frog
 - (3) Earthworm, Human
 - (4) Birds, Human
- 8) Role of pacemaker is :-
- (1) To initiate and maintain the minimum rhythmic contractile activity of the heart
 - (2) To initiate and maintain the arrhythmic contractile activity of the heart
 - (3) To initiate and maintain the rhythmic contractile activity of blood vessels
 - (4) To generate maximum action potentials for initiating and maintaining the rhythmic contractile activity of the heart
- 9) Usually duration of a cardiac cycle :-
- (1) 0.8 seconds
 - (2) 1.2 seconds
 - (3) 1.8 seconds
 - (4) 2.0 seconds
- 10) The second heart sound "dub" is associated with :-
- (1) Opening of semilunar valves

- (2) Opening of tricuspid and bicuspid valves
- (3) Closure of tricuspid and bicuspid valves
- (4) Closure of the semilunar valves

11) A unique vascular connection exists between the digestive tract and liver called :-

- (1) Renal portal system
- (2) Hypophyseal portal system
- (3) Gastric portal system
- (4) Hepatic portal system

12) All arteries carry oxygenated blood except :-

- (1) Hepatic Artery
- (2) Systemic Artery
- (3) Coronary Artery
- (4) Pulmonary Artery

13) The volume of blood pumped out by each ventricle per minute and average 5 litre in a healthy individual is called :-

- (1) Stroke volume
- (2) Joint diastole
- (3) Cardiac output
- (4) Ventricular diastole

14) Cardiac output is :-

- (1) Stroke volume $\times$ heart beat rate
- (2) Stroke volume - heart beat rate
- (3) Stroke volume + heart beat rate
- (4) Stroke volume $\div$ heart beat rate

15) Identify a, b, c, d and e in the diagram given below-

	a	b	c	d	e
--	---	---	---	---	---

(1)	Pulmonary artery	Pulmonary vein	Ventral aorta	Vena cava	Body parts
(2)	Pulmonary artery	Pulmonary vein	Dorsal aorta	Vena cava	Body parts
(3)	Pulmonary vein	Pulmonary artery	Dorsal aorta	Vena cava	Lungs
(4)	Pulmonary vein	Pulmonary artery	Dorsal aorta	Vena cava	Body parts

(1) 1

(2) 2

(3) 3

(4) 4

16) Match the columns and choose the correct answer :-

	Column-I		Column-II		Column-III
a ₁ .	Blood pressure	b ₁ .	High blood pressure than normal	c ₁	120/80 mmHg
a ₂ .	Hypertension	b ₂ .	Pressure applied by circulating blood on the walls of blood vessels	c ₂ .	140/90 mmHg

(1) a₁b₁c₁, a₂b₂c₂

(2) a₁b₂c₁, a₂b₁c₂

(3) a₁b₂c₂, a₂b₁c₁

(4) a₁b₁c₂, a₂b₂c₁

17) In humans, blood passes from the ventricles to the pulmonary artery and aorta due to :-

(1) Increase in atrial pressure

(2) Increase in ventricular pressure

(3) Decrease in ventricular pressure

(4) Suction pull

18) Cause of closure of semilunar valves in human heart is :-

(1) Ventricular diastole and increase in ventricular pressure

(2) Ventricular systole and increase in ventricular pressure

(3) Ventricular diastole and decrease in ventricular pressure

(4) Atrial diastole and decrease in atrial pressure

19) Choose the schematic diagram which properly represents pulmonary circulation in humans:-

20) During each cardiac cycle two prominent sounds are produced which can be easily heard through a :-

- (1) Electro cardiograph
- (2) Stethoscope
- (3) Sphygmomanometer
- (4) Galvanometer

21) Acute chest pain when no enough oxygen is reaching the heart muscle is called :-

- (1) Heart failure
- (2) Heart attack
- (3) Cardiac arrest
- (4) Angina pectoris

22) Which of the following is not a function of sympathetic nervous system ?

- (1) Increase the rate of heart beat
- (2) Decrease the rate of heart beat
- (3) Increase the cardiac output
- (4) Increase the strength of ventricular contraction

23) Which one of the statements is incorrect ?

- (1) Factors for blood clotting present in blood plasma found in an inactive form
- (2) Plasma without clotting factor is called serum
- (3) Basophils are involved in inflammatory reactions
- (4) Neutrophil are the most and eosinophils are the least among leucocytes

24) Which of the following statements are true ?

- (1) Albumin helps in osmotic balance.
- (2) Plasma without the clotting factors is called serum.
- (3) Globulins are involved in defence mechanism.
- (4) All of these

25) Usually a healthy individual has gms of haemoglobin in every 100 ml of blood.

- (1) 12-16 gm
- (2) 16-20 gm
- (3) 10-12 gm
- (4) 9-12 gm

26) are the most abundant agranular WBCs and are 20%-25% of total leucocytes.

- (1) Acidophils
- (2) Basophils
- (3) Neutrophils
- (4) Lymphocytes

27) Give the correct sequence of the conducting system of human heart :

- (1) Bundle of his → S.A. node → A.V node → Internodal path → Purkinje fibres
- (2) S.A. node → Internodal path → A.V. node bundle of his → purkinje fibres
- (3) A.V. node → S.A. node → Internodal path → Purkinje fibres → bundle of his
- (4) Purkinje fibres → Internodal path → S.A. node → A.V. node → bundle of his

28) Study the given diagrammatic presentation of phases of cardiac cycle and select the correct

option.

(a) Out of 0.7 sec of artial diastole, first 0.4 sec coincides with

ventricular systole

- (b) During atrial diastole, the blood always comes into the ventricle from atria
- (c) During ventricular diastole, the semilunar valves remain close and AV valves remain open
- (d) Ventricular diastole only coincides with atrial systole

- (1) a only
- (2) a, b only
- (3) a, b, c
- (4) c only

29) The systemic circulation differs from the pulmonary circulation in that

- (1) It starts by the pumping of deoxygenated blood by the right ventricle
- (2) It ends by the return of deoxygenated blood into right atrium
- (3) It includes the pulmonary aorta and pulmonary veins
- (4) It carries only deoxygenated blood

30) Which of the following sequence is correct in terms of abundance ?

- (1) Lymphocytes > Monocytes > Eosinophils > Basophils
- (2) Monocytes < Eosinophils < Basophils
- (3) Neutrophils < Lymphocytes < Monocytes < Eosinophils < Basophils
- (4) Lymphocytes > Monocytes > Neutrophils > Eosinophils > Basophils

31) Our heart is not pumping blood effectively enough to meet the needs of the body, such condition is known as :

- (1) Heart attack
- (2) Heart block
- (3) Heart failure
- (4) Cardiac arrest

32) Plasma is a straw coloured, viscous fluid constitutes nearly _____% of blood.

- (1) 55
- (2) 45
- (3) 90
- (4) 10

33) Which inorganic ion plays an important role in clotting?

- (1) Fe^{+2}
- (2) K^{+}
- (3) Ca^{+2}
- (4) Cl^{-}

34) Disease not related to circulatory system is :

- (1) Angina pectoris
- (2) Atherosclerosis
- (3) Myocardial infraction
- (4) Myasthenia gravis

35) In which pair erythroblastosis foetalis occur -

- (1) Rh^{+} male and Rh^{-} female
- (2) Rh^{-} male and Rh^{-} female
- (3) Rh^{+} male and Rh^{+} female
- (4) Rh^{-} male and Rh^{+} female

36) In human heart between both atrium a septum found which is a -

- (1) Thick muscular wall
- (2) Thick fibrous wall

- (3) Thin fibrous wall
- (4) Thin muscular wall

37) Centre for heart beat regulation is present is :

- (1) Pons varoli
- (2) Cerebellum
- (3) Cerebrum
- (4) Medulla

38) During diastole :

- (1) Blood enters the heart
- (2) Blood leaves the heart
- (3) Blood leaves the ventricle
- (4) Blood enters lungs

39) Identify option which correctly describes position of sino-atrial node in heart -

- (1) Lower right corner of right atrium
- (2) Upper left corner of right atrium
- (3) Upper right corner of right atrium
- (4) Lower left corner of right atrium

40)

Which wave marks depolarisation of ventricles -

- (1) P-wave
- (2) Q-wave
- (3) QRS wave
- (4) T-wave

41) Purkinje fibres arise from :

- (1) Apex of ventricles
- (2) Middle of ventricles
- (3) Anterior parts of atria
- (4) Posterior part of atria

42) All veins carry deoxygenated blood except :-

- (1) Renal Artery
- (2) Hepatic vein
- (3) Hepatic portal vein
- (4) Pulmonary vein

43) Lymph -

- (1) Transport oxygen to brain
- (2) Transport carbon dioxide to the lungs
- (3) Returns interstitial fluid back to heart
- (4) Contains RBC, leucocyte and more proteins as compared to blood

44) The main difference in the structure of arteries and veins is in:

- (1) Tunica intima, made up of simple squamous epithelium
- (2) Tunica media
- (3) Tunica externa
- (4) Tunica adventitia

45) Select the odd are :

- (1) Eosinophil
- (2) Basophil
- (3) Monocyte
- (4) Neutrophil
